CUSTOM DESIGNED & BUILT SYSTEMS

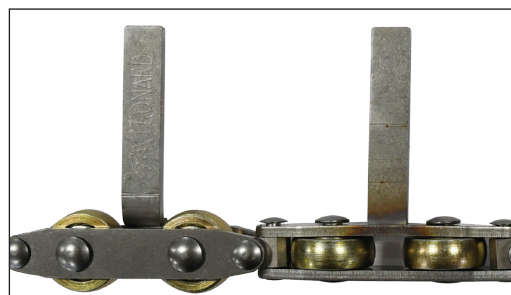

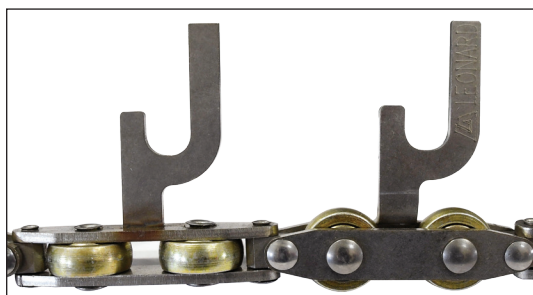

LEONARD AUTOMATICS, INC.

"our reputation is stainless"®

TRANSPORTER CONVEYOR SYSTEM

The **Transporter Conveyor** chain is the only chain offered to the laundry industry that is constructed of stainless steel. This construction not only provides greater pull strength, but also the corrosion resistance needed for long-term operation in a garment finisher.

The **Transporter Conveyor**, designed for industrial laundry applications, is an upright pendant style conveyor featuring 3-1/8" and 6-1/4" pendant spacing. The Transporter is available in the traditional upright style as well as our **"Helping Hand"** design. The design dramatically reduces drag on the conveyor system by carrying the hanger rather than dragging the hanger as in traditional systems.

The Transporter chain can be used as a **direct replacement** for many existing systems. Additionally, our drive units have been designed for ease of installation and superior performance. Leonard Automatics also offers a full line of conveyor tubing and curves with all of the related parts to keep your system running smoothly.

Combine the **Transporter Conveyor** with our "cam style" auto loader for an ideal solution wherever high volume is needed. The loader comes complete with all of the needed sensors and hardware. It can be installed either as a stand alone unit or as a fully integrated part of your overall system.

*Please consult layout drawings for detailed dimensions.
Specifications subject to change without notice.
Manufactured in the U.S.A.
